

NAAN MUDHALVAN PROJECT PORTFOLIO | PHASE 2 OF 8

Phase 2: Data Model Design & Backend Table Configuration

Project: Auto Ticket Classification using Flow Designer | **Target Table:** Incident Workflow [u_incident_workflow]

1. Data Schema Architecture

A specialized custom table **Incident Workflow** (u_incident_workflow) is engineered to decouple educational support tasks from out-of-the-box enterprise ITSM incident tables. This ensures an isolated sandbox environment optimized for keyword classification testing without disrupting institutional core records.

2. Data Dictionary & Field Specifications

Field Label	Element Name	Type	Reference / Choice Options
Number	u_number	Auto Number	Prefix: 'INC' (System generated 7-digit auto integer)
Caller	u_caller	Reference	sys_user (References Active Institutional Directory)
Category	u_category	Choice	Network, Hardware, Access, Performance
Subcategory	u_subcategory	Choice	Wi-Fi, Projector, Forgot Password, Slow Computer
Short Description	u_short_description	String (160)	Brief subject / headline used by Flow classification engine
Description	u_description	String (4000)	Detailed user problem explanation and room coordinates
State	u_state	Choice	New (1), In Progress (2), On Hold (3), Resolved (6), Closed (7)
Assignment Group	u_assignment_group	Reference	sys_user_group (IT Support Tier 1, Hardware Specialists)
Assigned to	u_assigned_to	Reference	sys_user (Specific technician responsible for resolution)

3. Step-by-Step Implementation Activities

Activity 2.1: Custom Table Creation

- Navigate to: **System Definition** → **Tables** → Click **New**.
- Set **Label**: Incident WorkFlow (Name automatically populates as u_incident_workflow).
- Uncheck **Create module** (or maintain within a dedicated application menu).

- Under the **Controls** tab, check **Auto-number**, set Prefix: INC, and set Number of Digits: 7.
- Click **Submit** to commit table schema to relational storage.

Activity 2.2: Form Designer & Layout Standardization

Open the created table, access the Context Menu → **Configure** → **Form Designer**. Drag and drop two visual containers to structure the user input experience:

- **Left Column:** Number (Read-only), Caller, Category, Subcategory, State.
- **Right Column:** Assignment Group, Assigned to.
- **Full Width Section:** Short Description, followed by Detailed Description.

4. Entity Relationship & Schema Diagram
