

NAAN MUDHALVAN PROJECT PORTFOLIO | PHASE 4 OF 8

Phase 4: Flow Designer Automation Engine & Trigger Architecture

Project: Auto Ticket Classification using Flow Designer

Flow Name: Auto Classify School IT Tickets

Type: Event-Driven Process Automation

1. Automation Overview & Trigger Conditions

The core intelligence of this solution resides in ServiceNow's native **Flow Designer** engine. Unlike legacy business rules or complex JavaScript scripts, Flow Designer enables modular, low-code, trigger-based workflow execution that executes synchronously or asynchronously upon database operations.

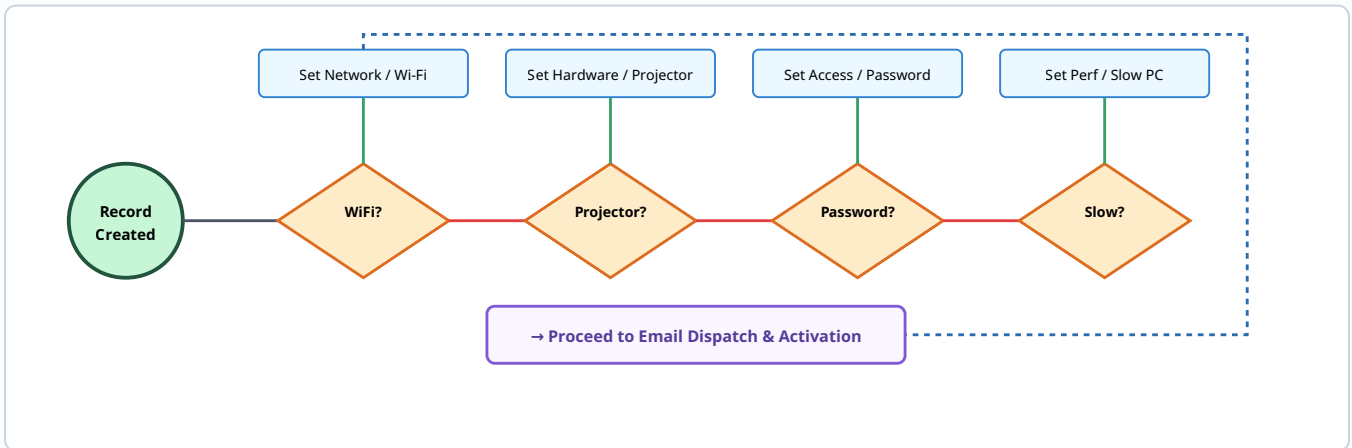

Trigger Definition

- **Trigger Type:** Record Created
- **Target Table:** Incident Workflow [u_incident_workflow]
- **Filter Conditions:** Category IS EMPTY
- **Execution Strategy:** Run with System User permissions to ensure updates execute without client privilege hurdles.

2. Data Flow & Keyword Parsing Matrix

Rule Order	Logical Branch	Keywords Scanned (Short Description)	Assigned Category	Assigned Subcategory
1	IF Branch	Contains 'Wi-Fi' OR Contains 'Network'	Network	Wi-Fi
2	ELSE IF Branch 1	Contains 'Projector' OR Contains 'Hardware'	Hardware	Projector
3	ELSE IF Branch 2	Contains 'Forgot password' OR Contains 'Password'	Access	Forgot Password
4	ELSE IF Branch 3	Contains 'Slow Computer' OR Contains 'Slow' OR Contains 'Performance'	Performance	Slow computer

3. Data Flow Diagram (DFD) — Level 1: Decision Logic

4. Construction Steps in ServiceNow Flow Designer

1. Open **Process Automation** → **Flow Designer** → Click **New** → **Flow**. Name: Auto Classify School IT Tickets.
2. Define Trigger: **Record Created** on table Incident Workflow with Condition Category IS EMPTY.
3. Add Flow Logic: **If** (Short description contains Wi-Fi / Network). Add Action: **Update Record** → Category = Network, Subcategory = Wi-Fi.
4. Add Sequential Flow Logic: **Else If** branches for Hardware/Projector, Access/Password, and Performance/Slow Computer.
5. Save flow definitions and prepare for transactional notification integration.
